Copyright and Disclaimer

This User Guide is intended for users, customers or Software Review Specialists to get to know the all-new DVDFab 11 software and, is free from DVDFab Software Inc. All rights reserved. Any attempt to use it for any commercial purpose is strictly prohibited. This publication shall not be, even partially, reproduced, redistributed, nor retransmitted in any form or by any means electronic, mechanical, photocopying, recording, or otherwise without the prior written permission of DVDFab Software Inc.

1. Introduction

Welcome to DVDFab Software Inc., the leading software vendor dedicated to providing the world top-notch DVD/Blu-ray/4K UHD Blu-ray copying, burning, ripping, cloning, authoring and video conversion solutions for over 16 years. As the 11th generation product succeeding DVDFab 10, the all-new DVDFab 11 features All-New Flat Design which is Plain and Simple.

- Totally Redesigned User Interface. Everything at a Single Glance.
- Float-in prompt windows make sure you shall never feel disturbed nor miss anything important.
- Task Queue now is integrated into the main window. Checking real-time task status is much easier.
- Utilities panel is relocated, sorted and made spacious. Every tool is right under your nose.

The disruptive innovations and incremental improvements combined instill one simple belief into users' minds – the all-new DVDFab 11 is the best DVDFab since the original DVDFab back in 2003, and it will present users a much better user experience they could have never dreamed of.

2. Update DVDFab

Depending on the different versions users may have installed, the ways to update to DVDFab 11 also vary:

2.1 Live Update

Live update can be only realized from inside the program itself, which means only users already installed DVDFab 11 can use this method to keep their installed versions up-to-date. To do that, follow the steps below:

2.1.1 Click the triangle button near the top right corner of Main Interface, and then from the drop-down menu click **Check for Update**;

2.1.2 Once a newer version is detected, click the

button to download the update package;

2.1.3 When the download finishes, the program will ask you to exit DVDFab that is running currently to

install the update file, click the

button;

Downloading the Update Package

Update Package Downloaded

2.1.4 The installation shall be finished in just a few seconds. When it's done, click the desktop shortcut icon to start up the new version.

Note that, due to network reasons, the Live Update might occasionally fail to detect the new version.

When this occurs, users can also use the traditional way to make the update.

2.2 Traditional Update

For users who are still with DVDFab 10 or even the outdated DVDFab 9, to upgrade to the latest DVDFab 11, they have to go the traditional way. For that purpose, simply visit DVDFab official website at http://www.dvdfab.cn/download.htm to download the installer of the newest DVDFab 11, and then follow the setup wizards to perform the installation on your computer.

3. Start up DVDFab 11

Before launching DVDFab 11, make sure your internet connection works fine, because DVDFab 11 shall depend on your internet network to access the server so that it can work normally. After the installation process finishes, click the DVDFab 11 desktop shortcut icon. When the Startup Screen pops up, users can see on the screen that the software is accessing the server information. This might take a couple of seconds, depending on your internet speed. Just wait until it finishes.

Other Info on the Startup Screen: DVDFab logo, trademark, software version, release date, vendor, and vendor's website.

Note: If your computer is not internet connected, DVDFab 11 cannot access the server information. In that case, you will see a popup window like below. When this happens, you can only use the free version HD Decrypter.

4. Authorize/Deauthorize DVDFab 11

Similar to DVDFab 10, DVDFab 11 still uses the online verification method for authorization. To remind you: authorizing DVDFab 11 requires a live internet connection, so check your Firewall or anti-virus software settings to make sure they do not block DVDFab 11 from accessing the internet. Besides, before authorization, make sure you are already a member at DVDFab Member Center; otherwise, go <u>Create an Account</u> first.

4.1.1 Upon DVDFab 11 startup, click the "Authorize" button on the popup window which asks you to "Buy Now", "Authorize" and "Try"; if you've already skipped that window, don't worry. At the main interface, click the sicon near the top right corner, and then from the drop-down menu, click the "Authorize" tab to pop up the **Authorization Window**;

5. Main Interface

Compared with the previous generation, the main interface of the reinvented DVDFab 11 is very concise:

On the top sits the *Top Menu*, where users can switch among the 4 major modules (the *Copy* module, the *Ripper* module, the *Converter* module and the *Creator* module), 8 Utility Tools (4 paywares including *iOS Screen Recorder, DRM Removal for Apple, YouTube to MP3* and *UHD Drive Tool* plus 4 freewares including *BDInfo, BDFix, YouTube Video Downloader* and *File Transfer*) and the *Task Queue Manager*.

To the left under the DVDFab logo sits the *Mode/Profile Switcher* button, *Add* button, *Merge* button and *Add from Mobile* button, depending on which module you currently stay with, buttons appear here shall vary;

At the bottom left corner, you can see the *Save to* selection box, where you can choose your optical drive or a location from computer hard disk drive to save the final output files;

Sitting in the center of the Main Interface is the primary Source Adding button;

At the top right corner, users can see a triangle button which opens the *Help Menu*;

To the left of the triangle button is a T-Shirt icon which opens the *Skin Settings* panel.

5.1 Skin Settings

At the Skin Settings panel, users can select from a dozen of predesigned skins to make their DVDFab 11 look special. Those skins are full of modern, fashionable and stylish elements. New skins will be constantly added through the course of upcoming new releases. The Skin Settings panel can pop up by clicking the T-shirt icon near the top right corner of the main interface.

MP4 + Add	ው Merge						

Skin Settings Panel

Moreover, users also are given the option to use the movie poster of the inserted DVD/Blu-ray/4K UHD Blu-ray title as the background. To do that, just check the box before the "Set the movie poster of the DVD/Blu-ray as the background" at the Skin Settings panel. Note that there is one exception, the White skin does not apply this option.

5.2.11 Feedback: click this tab if are experiencing some difficulties with DVDFab 11. It is suggested that you describe your problems in great details, so that our developers can troubleshoot efficiently and get back to you in time. Note that your DVDFab logs will be attached if you use this form.

Feedback	×
Thanks for contacting us, please submit your requirements or suggestions below. Your DVDFab log files will be attached by default, once pressing the Send button.	
E-mail: 1632509035@qq.com	
Description:	
	Send

5.2.12 About: this window shows software version, publisher, publisher's portal site, and etc.

5.2.13 Social Networks: the three logos at the bottom will direct you to DVDFab's official pages on Twitter, Facebook and YouTube, respectively.

5.3 Top Menu

The Top Menu is for users to switch DVDFab modules, utilities tools and task queue manager. In DVDFab 11, with the capacity to run multiple modules at the same time, it is now much easier to switch to another module even if there are already one or more tasks running in the current module.

5.4 Mode/Profile Switcher

The name of this button varies, in Copy and Creator tools, it is called *Mode Switcher*, which leads to *Mode Panel*; while in Ripper and Converter tools, it is referred as *Profile Switcher*, directing to the internal *Profile Library*.

5.5 Profile Library

As shown above, when you click the *Profile Switcher*, the program will direct you to the *Profile Library*. This Profile Library stores a ton of predesigned profiles targeting at a great variety of video formats and devices made by almost all the popular manufacturers worldwide. They are well organized based on the manufacturers or video formats. You can easily find and select the one you need.

The greatest benefit of these pre-configured conversion profiles is that developers have run tens, if not hundreds, of times of tests, just to make sure they produce the device-ready videos flawlessly. This is to say, if you don't really know what video formats your device support, or you simply are not tech-savvy enough to figure out what those parameters are all about, then you can just select the profile here to convert your DVDs, Blu-rays, 4K UHD Blu-rays or videos to watch on your target devices. As our developers have done all the research, so you don't have to.

At the bottom right corner of each profile lays a blank five star. You can click to color it, meaning this colored profile is the one you use at a regular basis, and by coloring it, you have added it into your *Favorite* profile lists available at the *Personal* area. Next time you start a new task, you just need to go to the Personal area and select it. Of course, you can also unmark a profile to remove it from your Personal collections.

5.6 Add Button

There are two **+** Add buttons, one sitting at the top left corner of the main interface right under the DVDFab Logo, the other housed at the central of the **Operation Window**. Besides, if you don't want to use the **Add** buttons to load your sources, you can simply drag and drop them directly into the main interface for the same purpose.

5.7 Operation Window

As shown above, Operation Window occupies the most part of the main interface. The contents showed here may slightly different when you choose different Modules and Modes. Users can perform many

operations here, such as choosing the title (sometime not necessarily the main movie title), or even the chapter range you want to copy, rip or convert; the audio track(s) and subtitle stream(s) you want to keep for the result.

5.8 Task Queue Manager

Compared to ver. 10, the Task Queue Manager in DVDFab 11 is no longer a separate window, but inlayed into the **Top Menu** bar. However, most of its functions remain the same as ver. 10. By clicking the **Task Queue** tab from the Top Menu, users can open the all-new Task Manager, which shows all the **Current Tasks, Finished Tasks, Archived Tasks** and **Scheduled Tasks** in one place, the detailed stats of each task, ready to start, processing, wait in queue, success, failed, cancelled, not processed, exit unexpectedly, etc., are all available at a quick glance.

Users can freely add new tasks into the Task Queue Manager, meaning, even there is currently one task in progress or more tasks, you can still load new sources in the same module or other modules and then add the new tasks; Users now can freely switch between the Task Queue Manager window and the main operation window;

5.8.1 Current Task

The Current Task list is the place where all the currently being processed and those still waiting to be processed tasks are displayed. If users want to add new tasks, they can simply click the tabs from the Top Menu to choose any desired module to add the new task, without intervening the currently being processed tasks. Note that the newly added tasks shall be waiting in this list, at the bottom.

🧐 DVDFab x64 11.0.1.5						0

Source	Option	Output	Status					
Archive	Delete Recycl	e Bin					Start	
	Option	Output	Status					
You Will Laugh So Much	Video Converter	FLV	Deleted					*

Explanations of some task stats:

Ready to Start: means that you have done the settings and editing related to that task, however you have not yet triggered the task; and you can still change relative settings and editing before hit the Start button from the main operation window; once hitting the Start window, that task status shall be immediately switched into Processing, and if you've started multiple tasks at one time, only the one at the top of the list shall be labeled as Processing, others will be tagged as Wait in Queue.

Processing: means that task has been started and currently in progress; at this point, changing settings and editing related to that task are no longer possible.

Wait in Queue: means that task is currently waiting for to be processed, which shall begin immediately after the previous task gets finished; at this point, changing settings and editing related to that task are no longer possible.

Success: means that task has already finished successfully.

Failed: means that task has failed.

Cancelled: means that task has been manually cancelled by user.

5.8.2 Finished Task

Finished Task is the place where all the successfully completed tasks are saved.

🗐 ovofab x64 11.0.1.5									¥ ▼ - □ ×

SAMPLE.Title2	UHD Ripper	MKV F	Passthrough	Success					● ■ €

5.8.3 Archived Task

Archived Task is the place where failed, crashed and unexpectedly exited tasks are saved, including your detailed custom settings you set up last time. You can reload these tasks from here directly without doing from all scratch. Depending how each task was processed, users might be able to see Success, Failed, or Exited Unexpectedly under the status tab.

Reload Delete	Report					al

Explanations of some task stats:

Success: means that the task is finished successfully, only those success events that have been completed when a crash happens on the following tasks from the Current Task will be saved here.

Failed: means that the task was failed.

Exit Unexpectedly: means the program exited unexpectedly in the middle of that task, leaving the task unfinished; it will be saved by default in the Archived Task list, where users can redo it next time opening DVDFab.

5.9 Save to

save to: refers to the destination of the resulting backup. The default target in Copy and Creator options is your optical drive F:(Optiarc DVD+-RWAD-7580S FD06 (Ide)). You can click a or b to output DVD/Blu-ray movie folder or ISO image file respectively to save on your computer HDD, or you can also save the output backup directly to DVDFab Movie Server by clicking the little triangle button to select DVDFab Movie Server from the dropdown menu; in Ripper and Converter options, the default destination is a directory located on your computer C:\ drive, you can click to change a preferred location, click to upload the converted videos directly to social networks including YouTube, Vimeo and Facebook, or save them directly to DVDFab Movie Server or your mobile phones by the dropdown menu.

Besides, with the Copy and Creator modules, when the output destination is set to the optical drive, users are given an extra option to decide how many copies they want to make for a single task. They just need

to click the dropdown selector behind ^{Copies:} and then choose a number there to start the task.

6. Advanced Settings

6.1 In Copy tools

The *Advanced Settings*, or the wrench button appears when the source is loaded, and lies to the left of the *Delete Source* button behind the title name.

Right next to the wrench button in the main interface of the Ripper and Converter modules, aka the Advanced Settings button, is the *Video Edit* button, the one looks like a pencil. This button leads to the *Video Edit* Window, formerly known as the Video Effect Settings panel in version 8 and version 9. However, in version 11, the Video Edit window is completely redesigned from scratch, introducing some long-awaited features and delivering a much better user experience.

7.1 Add Watermark

Depending on your preference, you can plant a watermark into your video, with a string of texts or an image of your favorite.

To add a string of texts, click the button and then type your wanted texts into the text box shown below. You can see the texts at both the Source and Output Preview windows above. Besides the font, size, color, style and transparency that you can freely adjust, you can also decide which part of the screen your texts will stay, simply by dragging the text box at the **Source Preview window** to reposition. Clicking on the a can hide/show the texts.

Video Edit		CELINE_DION.Title0		- 0 ×

	ок	Cancel

Clicking on the button, it allows users at the popup panel to rotate the video 90 degrees clockwise or counter clockwise, and adjust the brightness, contrast and saturation via the three sliding bars respectively, or by directly entering the values at the three boxes behind.

7.4 Crop Videos

Video Edit	CELINE_DION.Title0	- = ×
Source	Output	
· II • \		
Text		1920*1080 00:13:54 / 01:33:07
		⊡ Q. ● @
Crop video 00:16:40 Video thumbnail is currently still in the works Resolution: 1920 x 1080	00:33:20 00:50:00	01:06:40 01:23:20
Crop Aspect Ratio	Distance to Edge	
Customize *	Top Bottom Left 0 ≑ 0 ≑ 0	
		OK Cancel

The Crop function lets users decide which part of the display area should be kept in the converted result, which is especially helpful when the source video has large portion of black bars around. The options of Crop Aspect Ratio vary from Auto, Original (means not be cropped at all), 4:3, 16:9, 2.35:1, 2.39:1 to Customize.

Distance to Edge: Increase or decrease the values of Top, Bottom, Left and Right with the triangle button and the inverse triangle button or just type in the real value at the given four textboxes to specify how to deal with the display area. After that, the width and height of the output display area will be changed correlatively. Besides, you can also crop it at the Source displaying part manually.

7.5 Trim Videos

Video Edit	CELINE_DION.Title0		- = ×

00:00:00 Trim video 00:16:40 Image: Start Time: Image: Start Tim	linitorelinitorel.	1:06:40	01:23:20
Start Time			
0			
Merge trimmed clips		ОК	Cancel

The new Trim feature in version 11 makes it easier for users to cut off the unwanted clip duration from the video that being edited. Simply drag the two red cursors on the timeline to decide the starting point and finish point of the wanted clip, that's the clip between the two red cursors. Or, users can also directly enter the timestamps at the Start Time and End Time selection boxes.

Merge trimmed clips allows users to merge the rest clips into one video file, which is enabled by default.

Trim Invert function lets you choose the opposite parts of the selected clip, which means to cut off the selected clip from the source. And if the "Merge trimmed clips" is activated, then the rest parts will be combined and merged into one single video clip.

By multiply applying the Invert function together with the sliding bar, users can cut multiple clips off the original video and merge the rest clips into one single video, this is especially helpful when parents do not want their kids to see some adult-only scenes in certain movies.

Click the b^{-5} button play from 5s ahead of the trim start point, similarly, click the b^{+5} button to play

the next 5 seconds from the trim end point.

This section

is for users to zoom in, zoom out and scale to fit the timeline.

7.6 Delete Edits

If you want to delete the edits or changes you've just made, including text watermark, image watermark, subtitles, crop changes and trim settings, you need to first select it — the yellow part for example — and then click the Trash bin button to delete it.

8. Common Settings

To open the Common Settings window, you need to click the **Help** Button with the inverse triangle icon available at the top right corner of Main Interface.

Common Settings								×

➔ Default						ОК	Cance	el

8.1 General

A lot of basic settings can be preset here.

8.1.1 General

Language: Choose the language you use or are familiar with to be the display language. Create files in subfolders of output directory: Automatically create a subfolder containing the output file

in the output directory when the task is done.

Open output directory when done: Automatically open the containing folder where results are located after the tasks are finished.

Temporary Directory: The place where DVDFab saves the temp files during each task.

Allow upgrading to Beta version: this feature will make Beta versions available to you.

Join our user experience improvement program: You determine whether to enable this option or not. But DVDFab is always open to suggestions, feedbacks and advices to make our software better.

Shut down the main interface: Upon this action, you can let the program minimize to system tray or exit itself.

Way to display Task Queue Manager: Separated Window and Integrated Tab options are available, the former allows the Task Queue Manager to be displayed as a standalone window, the latter integrates it into the main interface.

Way to display dialog/message boxes: Directly pop up and Float in from bottom options are available.

CPU cores running for DVDFab: You can configure your CPU cores to run for DVDFab, which can be set up to 4 cores.

Move program icon to systray when minimizing main interface: When main interface is minimized, program icon shall be moved to system notification area.

Add Auto-play handler: Enable this feature, DVDFab will auto start itself and access the disc whenever you insert a disc in your disc tray.

Add context menu to open video source by DVDFab: This option will make DVDFab appear in the context menu when you right click on the video file on your local disk.

Allow running multiple instances of DVDFab: Literally, this means, by enabling this option, more than one threads of DVDFab can be run simultaneously.

Prevent standby/hibernation/screen saver when processing: This means when you are during a task, system will prevent itself from switching into power saving and sleep mode, at the same time, screen saver ceases to work, too.

Check for on-the-fly decrypter automatically: DVDFab will auto-detect the other decrypting software's possibly running on background and will alert users to close them for more reliable performances of DVDFab.

Check for DMA automatically: When this option is active, DVDFab will auto-check if your system is in DMA mode, if not, which means PIO transfer mode is enabled, there will be a pop-up window with a button allowing you to assert DMA mode for optical drives and hard discs.

'Reset DMA' button right behind allows users to check DMA status at other times instead of upon startup, e.g. system will probably switch to PIO mode especially after dealing with a dirty or scratched disc, which can be noticed by the obvious slowdown in reading/writing speed. At this point, you can click this button and then reboot your PC to make sure DMA mode is enabled.

8.1.2 A/V Codec

Common Settings							>	×
General	Drives	DVD		Blu-ray	S	Streams	Conversion

➔ Default							Cancel	

Settings on this page refer to the applied video decoder and encoder per different sources (H.264/VC1/MPEG2).

Disable all GPU codes for decoding and encoding: If your computer is powerful enough, you can disable all the GPU codec's to pursue a most dependable processing.

Video Decoder: Currently, there are Software, CUDA, DXVA, AMD APP, Intel Quick Sync and Core AVC available for H.264 source; Software, CUDA, DXVA, AMD APP, and Intel Quick Sync available for VC1 and MPEG2 source; only Software, CUDA and Intel Quick Sync are available now for the H.265 video sources.

Video Encoder: A program which uses pre-defined algorithms to encode, or compress audio or video data for storage or transmission use. Currently, Software, CUDA and Intel Quick Sync are available both on H.264 and H.265 video sources.

Hardware Info: DVDFab can analyze your computer hardware information and give you a very clear idea about what your computer is capable of as far as hardware acceleration is concerned.

Enable <u>Lightning-Recoding</u> when applicable (accelerate H.264 software decoding and encoding): Lightning-Recoding is a homebrew technology by DVDFab applied in Blu-ray Copy Full Disc and Main Movie modes to considerably enhance the converting speed when it comes to compress H264 video.

Note: GPU acceleration and Lightning-Recoding are not expected to be applied simultaneously.

Enable <u>Lightning-Shrink</u> when applicable: DVDFab Lightning-Shrink takes the advantages of NVIDIA's CUDA hardware acceleration or Intel Quick Sync, to significantly cut down the time you spend on ripping or converting Blu-ray movies, shockingly to be within an hour.

Codec Information: Here shows the capability of your Graphic Chipset and supported video codec's of your system.

Meta Info is a brand-new feature introduced in two of the DVDFab Blu-ray related products, Blu-ray Copy and Blu-ray Ripper, to be more specific. The primary goal of this feature is to gather all the Meta information of Blu-ray discs, including title, chapter, runtime, audio, subtitle, etc., which can be achieved by DVDFab customers manually editing and uploading via the DVDFab client.

If users want to become a Meta Info contributor, they will need to check the two options here.

➔ Default				ок	Cancel

Cinavia is a protection for movies in theaters and on DVD & Blu-ray discs. It consists of a multi-level watermark that is embedded in the audio track and, while being theoretically transparent (not-audible) for the listener, it is supposed to resist various transformations of the audio stream like re-compression, analog playback & record, re-sampling, limited pitch shift, etc. The base levels are analog, but on the top level there's the watermark payload that contains some restrictions regarding the playback environment.

DVDFab has a permanent and complete Cinavia removal solution to both DVDs and Blu-rays, which is currently the best solution available on the marketplace. The solution consists of two products, DVD Cinavia Removal and Blu-ray Cinavia Removal. The former is integrated in DVD Copy the Main Movie mode for the time being, while the Blu-ray counterpart is integrated in three products, including the Blu-ray Copy, Blu-ray Ripper, and Blu-ray to DVD Converter, of which, the Blu-ray Copy only supports the Main Movie mode.

As the newly released DVD and Blu-ray titles are more likely to come with the Cinavia watermarks, the supported titles are also being constantly updated. DVDFab will take the shortest time to support a new title as soon as it is released.

Enable Cinavia Removal: to remove the Cinavia encryptions on a DVD or Blu-ray, users must first enable this feature at the Common Settings panel, otherwise, DVDFab might not be able to detect whether or not a disc is infected with Cinavia. By enabling this option, when a Cinavia infected disc is detected, DVDFab will pop up an alert, the one shown as below:

make a back		on any devic	to which DVDFab DVD Cinavia Removal can help ce, but for the time being, only with the DVD Copy	
	oter selection is navia logo to ren		le if you want to remove Cinavia. ia.

			English AC-3/2 visual imp	

Delete temporary Cinavia repair data when done: during the Cinavia removal process, DVDFab will download the repair data from DVDFab server and save it on user's hard drive. When this option is enabled, DVDFab will automatically delete that repair data. If not, the repair data will stay on user's hard drive, which could eat up the free space on that hard drive quickly.

Temporary Directory: the place where DVDFab stores the Cinavia repair data on user's hard drive. The path can be relocated, and users also can manually empty the folder to delete the repair data.

For more information: <u>http://blog.dvdfab.cn/cinavia-protection.html</u> Check out the supported titles here (being constantly updated): <u>http://forum.dvdfab.cn/forumdisplay.php?f=66</u> Guide of removing Cinavia on DVDs: <u>http://www.dvdfab.cn/dvd-cinavia-removal.htm</u>

Guide of removing Cinavia on Blu-rays: http://www.dvdfab.cn/blu-ray-cinavia-removal.htm

DVDFab Remote is a mobile application that works on both iOS and Android platforms. The idea behind this handy mobile app is to keep users timely updated with the task status information from DVDFab client if they have something else to do, while DVDFab client is doing its own job, so that they don't have to sit near the computer screen all the time and watch the task to be completed. We will talk about this mobile app further in Chapter 10.

8.1.6 Movie Server

DVDFab 11 supports to directly output the copied or converted DVDs, Blu-rays and 4K Ultra HD Blu-rays to the external HDDs attached in the Movie Server.

Delete the temporary files when done: when this option is enabled, the temporary files will be deleted once the copy or conversion process is complete.

Temporary Directory: the path where temporary files are stored, you can feel free to relocate the directory path to anywhere on your HDD, as long as there is enough free space.

	Do not eject source disc when task	finishes					
🕈 Default					ОК	Cancel	

I/O Mode: Choose the mode for reading drives among AUTO, ASPI, SPTI and Passkey. To the great extent, the AUTO mode is recommended. However, when reading error occurs, you can try to switch it to the mode you need.

Reading Error Control

Ask retry/ignore/abort when reading error: Enable this option, system will pop up a window asking you how to deal with the reading error encountered.

Ignore reading errors automatically: Choose this option, system will ignore the encountered reading errors without the pop-up window mentioned above.

Retry times: Select the times to retry to read the optical drive when reading error occurs, which can be up to 10 times.

Skip sectors after a reading error: There may be some reading errors resulted from your seriously damaged source DVD/Blu-ray disc, which couldn't be handled with. This time, you can skip the scratched sectors of the source disc, and the skipped sectors can be up to 64.

Cache Control: An optimized source reading mechanism developed by DVDFab Software Inc, which can greatly develop the efficiency of reading drive and writing data.

Blu-ray-File Reading Mode: To avoid the inconvenience of inserting a third-party driver, an internal UDF 2.50 parser is introduced by DVDFab Blu-ray Copy to read Blu-ray discs.

Do not eject source disc when finished copying: By default, system will eject the original disc when copying phase completes, disable it if you want to keep the source in the drive.

8.2.3 DVD/Blu-ray Write

	Verify disc when burning finish	ies			
	Do not eject disc when burning	g finishes			
Ĵ Default				ок	Cancel

Burning Engine: Currently, there are DVDFab Burning Engine, VSO Burning Engine, Nero Burn ROM and Imgburn available. However, Nero Burn ROM is not available as the option for Blu-ray burning engine. Write Speed: Choose reasonable burning speed according to your write drive and blank media's capability. Keep in mind: the slower in speed, the better in quality.

DVD/Blu-ray Writable Media Size: 4300 MB for DVD-5 and 8100 MB for DVD-9 are recommended. The recommended size for BD-25 is 23000 MB, and for BD-50 size is 43000 MB. Users also can customize the size. Bear in mind: Burning too close to the disc edge might increase the potential of playback issue.

Write type of DVD-R Media: Three options are available: Auto, SAO writing and Packet writing. Choose Auto, the engine determines how to write the data to the output media; Choose SAO(Session-at-once) writing, the burning engine will copy only one sector of a source once and take possession of 13MB of memory for the coupling information; Choose Packet writing, the engine will burn the entire source disc once for all, which is faster, more effective, and also of high space utilization compared to SAO writing.

Overwrite rewritable media automatically: Check this option to allow system overwrites the rewritable media automatically.

Verify disc when burning finishes: This additional feature serves as a checksum whether or not the disc is burnt properly.

Do not eject source disc when finished copying: By default, system will eject the original disc when copying phase completes, disable it if you want to keep the source in the drive.

Set booktype to DVD-ROM (only for DVD+R/RW media): Some standalone players are friendlier with DVD-ROM booktype, click this option to make the resulting disc more compatible. Note that not all drives support this feature.

8.2.4 Hybrid Disc

Common Settings		×
General	Drives DVD Blu-ray Stre	eams Conversion
Drives	Enable hybrid disc support	
Read	For Hybrid disc, specify a default opening mode to open	
DVD Write		
Blu-ray Write		
Hybrid Disc 🔸		

Theoretically, a Hybrid disc could refer to:

1). A disc that contains both DVD-Video and DVD-Audio content or SACD content. (More accurately called a universal or AV DVD. The DVD-Audio standard allows this. The SACD standard does not officially allow video, so it's unclear what a given SACD player will do with a hybrid SACD+DVD-Video disc.) Other variations of this hybrid would be a disc with both DVD-Audio and SACD content, or a disc with all three formats.

2). A disc with two layers, one that can be read in DVD players and one that can be read in CD players. (More accurately called a legacy or CD-compatible disc.)

3). A disc containing one BD layer as well as two DVD layers, with a total capacity of 33.5 GB (25 GB + 8.5 GB). The disc follows the "Blu-ray Disc, Hybrid Format" specifications provided by the Blu-ray Disc Association. The disc has a blue laser along with two layers like ordinary DVD laser. The Blu-ray and DVD layers are separated by a semi-reflective film that reflects blue light while it allows the red light to pass through the DVD layer underneath.

Note: Only certain kind of drive can read both layers of a hybrid disc, and to play the hybrid disc requires a certain player.

DVDFab offers a solution by enabling the preset as far as hybrid disc is involved: which layer is meant to be automatically recognized by DVDFab upon inserting the disc, CD, DVD, HD-DVD or Blu-ray?

8.3 DVD

8.3.1 DVD Protection

Common Settings					×				
General	Drives	DVD	Blu-ray	Streams	Conversion				
	🛃 Remove CSS (Cor	itent Scramble System)							
DVD Copy	🗹 Remove RC (Regi	Remove RC (Region Code)							
PathPlayer	Specify the disc's re Ask before openi Remove APS (Anal Remove UOPs (Us Remove UOPs Remove UOP Remove UOP	ng the disc og Protection System) ser Operation Prohibition: s from IFO files s from VOB files protection, like ARccOS, F k	• 5)						
ာ Default				ок	Cancel				

Remove CSS, RC, RCE, APS, UOPs, structure protection:

In order to copy the DVD disc, all these different copy protection systems are to be removed.

Sidenote on UOPs (User Operation Prohibitions): A form of use restriction used on video DVD discs and Blu-ray discs. Most DVD players and Blu-ray players prohibit the viewer from performing a large majority of actions during sections of a DVD that are protected or restricted by this feature, and will display the no symbol or a message to that effect if any of these actions are attempted. It is used mainly for copyright notices or warnings, such as an FBI warning in the United States, and "protected" (i.e., "unskippable") commercials.

Remove RCE, specify the disc's region code: To remove the 'RCE - Region Code Enhancement', you will be required to choose the correct region code at a pop-up window. The region code usually can be found on the original DVD package.

Remove layer break: When compressing a DVD-9 size content to fit on a DVD-5 blank disc in Main Movie, Full Disc, Customize, Customize Split or Merge mode, this option is supposed to be enabled, while DVDFab will ignore this setting and preserve the original layer break when it comes to Clone mode.

Enable Cloud Decryption Service: DVDFab will read the decryption data stored in Cloud Decryption Service for any new protections on DVD/Blu-ray, which will greatly improve the source reading and decryption process and save users' time.

8.3.2 DVD Copy

The settings here apply to all the copy modes of DVD Copy.

Common Settings							×
General	Drives	DVD	Blu-ray	Stre	ams	Conversion	
DVD Protection	Сору						
DVD Copy 🔸	Create dvo	lid.xml which can be used b	y Windows Media (Center			
PathPlayer	Split						
	Default CGP	FabCom					
		tles on Disc 1 if possible					
	Put more titles on Disc 2 if possible Customize						
	Default CGP	Black Screen					
➔ Default					ОК	Cancel	

Create dvdid.xml that can be used by Windows Media Center: This checkbox allows the user to specify whether a small disc ID file will be written along with the output folders. The file allows other applications to automatically find cover art and other information about the title on the internet, e.g. Windows Media Center.

Title Assignment Setting: if possible, put more titles on disc 1 or disc 2 as you prefer.

Default CGP: You can choose Black Screen or FabCom to replace the titles that are not be copied.

8.3.3 PathPlayer

What's PathPlayer?

PathPlayer can identify all the playable contents on a DVD disc to pave the way for a blazing fast decryption. It gives DVDFab the ability to copy DVD content only allowed to be played on a real DVD player. In this way, DVDFab will ignore unplayable content which may contain copy protections. How PathPlayer works?

PathPlayer works like a real DVD player, it follows every play path of a DVD, checking everything that you can access on a DVD player with a remote controller. When PathPlayer finishes, DVDFab can know all the content that a real DVD player will read. The copy protection exists in the unplayable DVD content, DVDFab will not read it when copying.

Disable PathPlayer:

Since PathPlayer may need several minutes to open a DVD, if you know the disc is not copy protected, you can disable it to save time.

Enable PathPlayer when necessary:

DVDFab will not enable PathPlayer in normal cases when opening a DVD. Once DVDFab detects a reading error when copying DVD, it will ask user to restart DVDFab to reopen the DVD using PathPlayer. In this way,

DVDFab has the ability of opening DVD as fast as before, and uses PathPlayer when really necessary. If the reading error is encountered more than a minute or two into the copy process it will save time to use the default ("Always Enable") option below.

Common Settings					×
General	Drives	DVD	Blu-ray	Streams	Conversion
DVD Protection	PathPlayer				
DVD Copy	O Disable PathPla	yer			
PathPlayer 🕨	Enable PathPlay	er when necessary			
	Always enable F	PathPlayer			
	Navigation (DVD menu r	needs to be preserved.]			
	Change DVD p	olayback			
	Remove anno	ying PGCs (like FBI wai	nings)		
	Scan BOVs (Button Over	Video)			
	Scan cells lasting le	ess than 300 seconds			
			•		
	Scan one VOBU eve	ery 30 VOBUs			
	🗹 Check for multi	ple sets of BOVs in the	same cell (like Easter Egg	s)	
🖸 Default				ок	Cancel

Always Enable PathPlayer (Default): Improvements in PathPlayer and reductions in the scanning time have allowed this to become the default option. This option gives DVDFab the most information about your DVD and will usually result in a better, more reliable backup copy. You can still set the other two options (above) if desired. PathPlayer must be in "Full Disc" mode for the "Jump To..." navigation features to be active.

Navigation (DVD menu needs to be preserved): This feature gives user the ability to determine where to start playing DVD, whether from the first menu or the main title. And it also enables users to remove the unwanted PGC parts.

Scan BOVs (Button Over Video):

Button Over Video (BOV) is a feature seen more and more on recent DVDs. The purpose of BOV is basically to make a transition from your main movie to some extra that is in another VTS. One good example is the white rabbit feature in The Matrix. Other examples are Bambi II, Stuart Little 2, Spiderman and Men in Black II.

Scan cells lasting less than 300 seconds:

DVDFab scans the title VOBs for BOVs. To speed things up and not waste time scanning parts of the VOB that are unlikely to contain buttons, DVDFab only scans cells that are of small to average duration. The preferences allow you to adjust the maximum duration of cells which will be scanned for BOVs. Default value is '300', which is a cell time of 5 minutes.

Scan one VOBU every 30 VOBUs:

Set it to 1 to scan every VOBU in the selected cells (slowest but safest). Set it to a higher number to by-pass some VOBUs within a cell. In any event, for safety, the first and last VOBU of every cell in the VTS is scanned. Our tests show the default setting of 30 is reasonable. At this setting, the first VOBU is

scanned, then 30 are missed, then another is scanned, then another 30 are by-passed, until the cell ends, at which time the last VOBU is scanned. Default value is '30', which is about 15 seconds of video.

Check for multiple sets of BOVs in the same cell (like Easter Eggs):

This checkbox option tells PathPlayer to check for additional BOVs when it finds one set in a cell. This is found only rarely on certain discs for unusual features (like Easter eggs). This deeper analysis takes additional time, so the default is unchecked for faster PathPlayer analysis. You can enable the feature by checking the box if you think there are features like this on your disc.

8.4 Blu-ray

8.4.1 Blu-ray Protection

Make sure that "Remove AACS, BD+, RC, BD-Live, UOPs" options are enabled, or the source will not be accessible due to these different protections.

Common Settings							×
General	Drives	DVD	Blu-ray	Str	eams	Conversion	
	Remove AACS (Adv	anced Access Conter	nt System)				
Blu-ray Copy	🛃 Remove BD+						
BDInfo	🗹 Remove BD+ fir	mware warning					
	🛃 Remove RC (Regio	n Code)

	🛃 Enable Blu-ray 3D o	only disc to be played	on 2D display				
	🔽 Hide PS3 update file	es					
ာ Default					ОК	Cancel	

Remove AACS (Advanced Access Content System):

The Advanced Access Content System (AACS) is a standard for content distribution and digital rights management, intended to restrict access to and copying of the next generation of optical discs and DVDs. The specification was publicly released in April 2005 and the standard has been adopted as the access restriction scheme for HD DVD and Blu-ray Disc (BD).

Remove BD+/Remove BD+ Firmware Warning:

BD+ is a component of the Blu-ray Disc Digital Rights Management system. It was developed by Cryptography Research Inc. and is based on their Self-Protecting Digital Content concept. Remove RC (Region Code): Blu-ray Discs are digitally encoded with a "region code" (A, B, or C, sometimes referred to as 1, 2, or 3), which allows the disc to play only in a Blu-ray player with the same region code. Remove BD-Live:

Some of BD-Live content are AACS encrypted, and the backup disc you are watching it without decryption. Remove UOPs (User Operation Prohibitions): Please see above DVD part.

Remove CCI (Copy Control Information): A two-byte flag included in digital television streams that allows content owner and cable operators to specify how content can be copied. CCI is define as part of the 5C copy protection specification devised by DTCP working group back in 1998, and later defined as part of the FCCs Plug and Play agreement in 2003.

Hide PS3 update files: As the protections embedded in the source Blu-ray have been removed after the source reading, there is no need to update the firmware of your PS3 for playing the output file. So, we suggest you enable this option.

8.4.2 Blu-ray Copy

Common Settings							×

BDInfo 🕨	Directory C:	\Users\fengchao.wan	g\Documents\	DVDFab11\BDInfo\			
🕈 Default					ок	Cancel	

Blu-ray Information refers to the video and audio technical specification from a Blu-ray movie disc, including disc size, playlist content, as well as stream codec and bit rate details.

Why do we need BDInfo report?

Upon finishing a Blu-ray backup process, some users may want to know the detailed information on the Blu-ray title they have just backed up, which may include the bit rate and codec information on both audios and videos. This can be done by some third-party tools which may require an extra amount of time, long or short, to process some additional analysis, which means inconvenience to most of users. This is when and where DVDFab BDInfo feature kicks in, to make this BD info collection process drastically short.

8.5 Streams

This part defines how DVDFab 11 preselects Audio track(s) and Subtitle stream(s) after analyzing sources.

8.5.1 Audio

Common Settings					×			
General	Drives	DVD	Blu-ray	Streams	Conversion			
Audio 🕨	The following settings wi	ll take effect in Copy m	odule only.

8.6 Conversion

8.6.1 Convert

This page contains some settings that apply to DVD/Blu-ray Ripper.

Always display the forced subtitle: Forced subtitle usually refers to a foreign or alien language, or a sign, flag, or other text in a scene is not translated in the localization and dubbing process.

Enable "Turbo CPU" for maximum CPU usage: The "Turbo CPU" is a speedup tool which can rearrange the task priority and set the task that are more important to be proceed early.

Memory amount used for converting: There are five options for users to select the ideal way DVDFab 11 uses your PC's memory: Auto, Fast Speed, Standard, High Quality and Max. Usually, Auto is the recommended and also the most appropriate choice, which can adjust the usage of your PC's memory according to the source and the current settings. If you choose Fast Speed, the conversion speed will be much faster than the normal speed, but you may pay for it by making a compromise at the output quality; if you choose High Quality, you can get a much better quality video, but the conversion will slow down and the output size will be bigger than the source to possess bigger memory amount; if you choose Standard, then the video conversion will be performed with the standard speed and there won't be much obvious quality degradation working with DVDFab 11; Note that "MAX" may not produce the fastest speed; each PC system will be different so try each setting to see the result.

Common Settings						×
General	Drives	DVD	Blu-ray	Str	eams 🤇	Conversion
Convert 🕨	Always display only	forcod cubtillo				
Output PSP	Always display only Always remove HD Create the cue file f Enable "Turbo CPU Memory amount used ff CD = 700 Scale Method Good (f Deinterlacing Method Crop automatically Audio Downmix from mu Default Framerate Same as sour Specified in pr DefaultAudio Channel	audio or the audio profiles " for maximum cpu us or converting Auto				
ာ Default	Belauk/auto Chaliller				ОК	Cancel

CD Size: Customize the size of a CD when converting so that the files produced will fit in the desired space. Scale Method: Provides three choices to zoom in/out the video, namely, zoon in a low-definition video to a high-definition video or zoom out a high-definition video to a low-definition video. Choose Fast, the process will be speeded up with speed several times faster than normal, but you may get a video inferior to the source; choose Good, both the processing speed and quality are ensured; choose Best, you will get a better-quality video compared with the source, but the processing slows down.

Crop automatically: This checkbox allows you to turn the cropping function on or off by default. You can also set this manually using the buttons on the Crop Settings page as you set up a conversion.

Audio Downmix from multichannel to stereo: Switch the multichannel to one stereo among Stereo, Dolby

 $\mathsf{ProLogic}\Pi$ and $\mathsf{Dolby}\ \mathsf{ProLogic}.$

Default Frame rate/Audio Channel: Set the default Frame rate and Audio Channel to be the same as source or specified in profile.

8.6.2 Output

Define how to name the output file, based on DVD Source, Blu-ray Source or File Source and how to manipulate keywords.

Common Settings						×			
General	Drives	DVD	Blu-ray	Streams		Conversion

Don't show again				ОК

DVDFab Mini, a simplified version of DVDFab Copy and Ripper modules combined, is introduced in

DVDFab 11 and is targeted for those non-heavy users who just want to easily and quickly copy or convert their DVDs and Blu-rays without wading through any sophisticated settings. In other words, with DVDFab Mini, users are able to get things done with the minimal steps possible, meaning that even fresh users don't have to go through any learning materials to get the task done. Therefore, it is safe to say that despite there is a Mini in the name, its power is not mini at all.

DVDFab Mini does not have its own installer program, instead, it will be automatically installed on user's computer accompanying the installation of DVDFab 11. However, it does have its own desktop shortcut. What's more, DVDFab Mini cannot run side by side with DVDFab 11. Here below are the detailed walkthroughs on how to install and use DVDFab Mini.

9.1 Set up DVDFab Mini

To download and install DVDFab Mini, users just need to download and install the latest DVDFab 11, which is always available at our official website <u>www.dvdfab.cn</u>. After installation, users will see a DVDFab Mini desktop shortcut sitting side by side with DVDFab 11.

9.2 Copy a DVD or Blu-ray

To copy a DVD or Blu-ray, just click the Copy tab, then insert a DVD or Blu-ray to the optical drive (or load an ISO or folder from hard drive); after analysis, choose a copy mode, the output size, output destination, and possibly an audio track and subtitle stream if you've selected the Main Movie mode, and the only thing left is to press the Start button to get the task going.

9.3 Convert a DVD or Blu-ray

Similarly, to convert a DVD or Blu-ray, users need to click the MP4 tab, because the only default conversion profile in DVDFab Mini is the MP4, and then load the source DVD or Blu-ray, choose a wanted audio track and subtitle stream, select a location from hard drive to save the output MP4 file, and then press the Start button the initiate the conversion process.

9.4 Add Other Conversion Profiles

If users want to use other conversion profiles from DVDFab 11, they will have to manually save the wanted profile at the Advanced Settings panel, and the next time opening DVDFab Mini, the user-saved custom profile will be imported automatically to DVDFab Mini.
